

## Barcelona Trading Point

One of the most important trading events in Europe

### **Reduce your market risk with hedging**

Most traders use all kind of technical indicators as a tool for trading financial markets. However the most important trading rules, money management and hedging or stops, are not been by most traders and the main reason to lose money. Instead of using expensive stops, hedging is a good alternative to protect your open positions. Corporations concentrate on the price of the product; but forget to hedging price risk. For example, foreign exchange risk or price risk of the product (commodities). This presentation shows a set of easy to use tools and disciplines to reduce risk as much as possible for corporations and private investors.

Ron Schelling (1954) was born in The Netherlands and started as air traffic controller in the Dutch Air Force followed by pilot training in Europe and USA. Flying business aircraft and teaching as flight instructor in Europe and the USA for over 25 years. Already during his flying career he started in 1983 with commodity trading in Dallas, London and The Netherlands. He was also involved in Airline Lease Partnerships and early advisory on hedging airline jet fuel price risk. Since his start in the financial world he has been active in technical analysis and trading systems, using the discipline he had learned in aviation. Today he trades a small private fund and several trading accounts, mostly using Spreads and Arbitrage on Forex and Commodity Futures. He also advise companies/airlines on hedging Forex and commodity price (Jet Fuel) price risk. He is a speaker on international technical analysis seminars and founder of 2HEDGE Company, [2hedge](#)
